

## Warmi Cuna

**Allima Cacao Agrarian Cooperative in Peru** is an organization dedicated to the production and marketing of quality cocoa beans, with a social base of 350 producer families in 11 different communities in the districts of Chazuta, Chipurana, Barranquita and Pongo de Caynarachi, in the provinces of San Martín and Lamas, San Martín Region. It was founded on April 14, 2002 under the name of Asociación Central de Productores Agrarios del Valle del Bajo Huallaga, where by 2009 we changed our name to Asociación Central de Productores Agrarios ALLIMA CACAO, and we became a cooperative on February 28, 2016 with 31 member producers.

The philosophy of the Cooperative is to seek the sustainability of the cocoa chain with a focus on circular economy (integral use of the cocoa fruit: Seeds, shell, mucilage) and the diversification of products based on cocoa (*Theobroma Cacao*) and Macambo (*Theobroma bicolor*), post-harvest technology is available for the use of cocoa mucilage, mechanical removal of cocoa beans during fermentation, solar dryers with water sensors for rain detection and robotic arms for the removal of beans during drying.

**Warmi Kuna** cocoa (Quechua word meaning: Women), is a type of cocoa from the Chazuta area (Province and Department of San Martín, Peru), on the banks of the Huallaga River, the cocoa plots are located between the Cordillera Escalera Regional Conservation Area and the Cordillera Azul National Park ([cima.org.pe](http://cima.org.pe)).

In the heart of Peruvian cocoa production, **Warmi Cuna** comes to change the picture of what was known to be the potential for CCN51. Leaving aside the automatization of post-harvest, it helped handle with extra care the widely pre-judged clone to improve mixing and uniformity and express its hidden character; with profound *tropical sweetness*, it unrolls to a rainbow of flavors, among which *tart fruit*, *spicy liquorice*, and *ripe chestnut* allowing Warmi Cuna being one of the deeply appreciated cocoas of the map, expressing better its

profile in higher percentage.
